- The 4th international conference of the Royal Medical Services. Le Royal Hotel Amman, Jordan. 12-15 May 2008. Military psychiatry: A Jordanian Experience (presenter)

CV

Experience

My work is divided between caring for inpatients in a psychiatric unit and doing liaison work at a general hospital. At the psychiatric unit I look after 10-15 patients at a time. Those cases are mainly acute and/or acute on chronic adult and old age psychiatric cases. On the ward I do about one in seven on-call.

On the psychiatric ward we do daily management round that is attended by the members of the multidisciplinary team, On that round all patients on the ward are discussed with the other specialists and consultants, residents and nurses, and the management plan for each patient is reviewed on regular bases. I myself attend the management round about 2-3 times a week. Any management round will be attended and supervised by a number of available consultants.

Weekly ward round (case conference) is held. Interesting cases or cases with management problems are presented by the resident and other members of the multidisciplinary team. These cases are reviewed with the consultants. Necessary recommendations are made to the treating consultant. My patients who are on the ward are reviewed by myself twice weekly on average. They are daily reviewed in the management round, and by my residents (Registrars) on regular basis.

At the general hospital I do three outpatient clinics per week, in each clinic I see about 20-25 patients. About 25% of my time is spent with acute cases and about 75% is spent with chronic cases. I do psychiatric consultations on the wards of a general hospital, and I treat patients belonging to different sub-specialities such as Neuro-psychiatry, old age, child psychiatry etc. Cases from the casualty department are assessed as well as acute cases on the medical wards, and a referral to a psychiatric ward is arranged if warranted.

Teaching responsibilities

Supervisor of Psychiatric Training for Residents in the Royal Jordanian Medical Services since 1999.

Member of examination committee of the Jordanian Board of Psychiatry, The Jordanian Medical Council since 2000. This committee awards the highest qualification in Psychiatry in Jordan and it is considered parallel to the MRCPsych certificate.

Part-time lecturer in the National Centre for Mental Health offering Psychiatric Training Scheme for Residents.

Part-time lecturer in Al-Rashid Hospital offering Psychiatric Training Scheme for Residents.

Part-time lecturer in Jordan University in Amman, Jordan for medical undergraduates from 1999-present.

Part-time assistant professor in University of Science and Technology in Irbid, Jordan for medical undergraduates since September 2002 for 1-2 days a week on a regular basis.

Medical undergraduate teaching

I give regular lectures to medical students at the University of Science and Technology according to their Curriculum. I also carry out clinical instruction for small groups of medical students (usually from 3-5) by assessing psychiatric patients at the outpatients department or on the wards. Each group of students is also assigned to one patient to take full history and to do the mental state examination. At the end of these sessions three groups of students come together and all cases are discussed in detail under my supervision. Home assignments are also presented by the students in these meetings.

CV

Medical postgraduate teaching

Psychiatric:

The Royal Medical Services psychiatric unit is an approved training center by the Jordanian Medical Board committee. I participate in the resident training scheme in which a number of psychiatric trainees are enrolled. After 4 years of training in psychiatry and passing yearly examinations they are allowed to sit for the board examinations. Doctors who pass the board examination are given a certificate of specialty in psychiatry. A national postgraduate training programme has been developed and approved by the Jordan Medical Council.

I also give lectures at the National Centre for Mental Health for the residents in psychiatry once or twice monthly.

Medical:

In the context of my liaison job in the general hospital I also participate in the teaching programme by giving psychiatric lectures to medical doctors. I usually try to choose subjects which are interesting to medical doctors and seek to inform them about the possible benefits of psychiatric treatment. I always emphasize how appropriate psychiatric referral and treatment can greatly improve the quality of life of their patients.

Research and publications

Research

- Jan 1994-Jan 1997 Structural brain abnormalities in male schizophrenics
- Jan 1994-Jan 1997 Dysplasia and anatomical dysconnectivity in schizophrenia
- Jan 1994-Jan 1997 Cerebral structural abnormalities
- Feb 1999-Aug 1999 Eating disorders among Jordanian female college students
- Sep 1999-Sep 2000 Post concussional syndrome among Jordanian police and military personnel
